Car AC Expansion Valve (TXV) Block

Category: Automobile

Thermal expansion valve (TXV) block that regulates refrigerant flow into a vehicle AC system's evaporator.

DESCRIPTION

This expansion valve (TXV) block is a metering component for vehicle air conditioning systems, controlling the flow of refrigerant into the evaporator to regulate cooling. It is listed as a generic aftermarket automobile AC part. No brand or model number is recorded for this item, so it should be matched against the vehicle's original valve block for compatibility before purchase.
