Mobile refrigerant recovery cart with dual digital manifold gauges

Brand: DSZH

Category: Spare Parts

A wheeled refrigerant recovery cart combining a dual digital gauge manifold, four color-coded hoses, and a vacuum pump.

DESCRIPTION

This DSZH mobile recovery cart combines a dual digital manifold — with a blue low-side and red high-side digital gauge, each reading ZERO/UNIT/R+/R- as printed on the units — mounted above a four-port manifold body with color-coded blue, yellow, red, and black service hoses. A vacuum pump with its own analog gauge and an oil bottle are mounted at the base of the black wheeled frame, which has a padded top handle and caster wheels for moving the unit around a job site. It is built for refrigerant recovery, evacuation, and charging in one mobile unit.
