Flange-type immersion heating element (coiled)

Brand: Thermowatt

Category: Heater

Thermowatt flange-mount immersion heating element with a coiled copper tube and two-terminal flange.

DESCRIPTION

This is a flange-type immersion heating element from Thermowatt, built for mounting through a tank flange with the element submerged in the water. The copper heating tube is bent into a coiled, looped run to increase surface area within the tank, and terminates at a mounting flange fitted with two electrical terminals for wiring. No model number is printed on the part itself.
