RTS-TW3 heating element with integrated thermostat

`Model: RTS-TW3`

Brand: Thermowatt

Category: Heater

Thermowatt RTS-TW3 flange-mount heating element with an integrated thermostat control on the same unit.

DESCRIPTION

The RTS-TW3 from Thermowatt combines a copper immersion heating element with a built-in thermostat control in a single flange-mounted unit. The thermostat housing, with its yellow rotary dial, sits directly on the brass mounting flange alongside the looped copper heating tube, so temperature control is integrated rather than wired separately. It is intended for water heaters where a combined heating/control unit simplifies installation.
