Screw-type immersion heating element (single-loop)

Brand: Thermowatt

Category: Heater

Thermowatt screw-type immersion heating element with a single-loop copper element and brass screw-in flange.

DESCRIPTION

This screw-type immersion heating element from Thermowatt has a brass hexagonal screw-in flange and a single folded copper heating loop. The threaded brass flange screws directly into the tank or vessel wall, with the copper element extending inward to heat the surrounding water or liquid. It is supplied as a single unit rather than a paired set.
