Washing Machine Drum Bearing Housing Plate

Category: Washing Machines

Stamped metal washing machine drum bearing housing plate with reinforcing ribs, center bearing hub, and splined shaft.

DESCRIPTION

This washing machine drum bearing housing plate is a stamped metal mounting plate with pressed reinforcing ribs for rigidity and a center bearing hub through which a splined drive shaft protrudes. Multiple bolt holes around the plate's perimeter align it to the tub or motor mount. It is supplied as the complete plate-and-bearing-hub assembly rather than a loose bearing alone.
